From us to you

- Congratulations on choosing freestyler™ as your new styling iron, created by Anoroc™ with you in mind.
- The freestyler has been manufactured to the highest standards and will provide you with effective, reliable results every time when used in accordance with the styling iron's instructions.
- The styling iron offers advanced ceramic tourmaline technology that evenly distributes heat over ceramic heated plates using a software supported microprocessor for stable temperature control.
- The freestyler styling irons will reach their optimum operating temperature (200°C) within 60 seconds.
- The moulded shape of the styling iron has been specifically designed for comfort and ease of use, with a 3 meter swivel cord, preventing the cord from becoming entangled.

## Protection

- The freestyler offers peace of mind, using negative ions that are emitted from the rare tourmaline mineral to seal in natural oils, moisture and colour in the hair, giving you beautifully styled, static-free hair complete with an attractive healthy shine.

## Compliance

- The freestyler has undergone independent compliance testing by Intertek, an internationally recognised electrical appliance certifier and complies with regulations within New Zealand and carries the CE symbol for peace of mind.

## Use

- The freestyler is intended to be solely used as a hairstyling aid and should not be used for any other purpose and only products approved by a reputable salon or hair professional should be used in conjunction with the styling iron.

## Operation

- The freestyler was designed with a universal voltage feature to operate at 110V or 230V (AC only) which, when travelling, will automatically determine and adjust to the incoming voltage.
- For added safety the freestyler has a built in thermal fuse that will automatically cut off the power supply if the temperature is too high and a current fuse that will again automatically cut off the power supply if the current is too high or in the unlikely event any other internal component fails.
- In the unlikely event the freestyler fails to operate, contact Anoroc Limited, no repair should be attempted by the user or any other unauthorised person.
- For added safety the freestyler is fitted with a sleep mode that will automatically turn off the iron 30 minutes after it's last use, however it remains powered until the iron is switched off. The styling iron will emit a warning beep intermittently and the LED will change from green to red and flash until the iron is reset by using the on/off switch.

- The freestyler is ready to use once the on/off switch is set to the on position illuminating the LED with a red light and will emit a single beep. Whilst heating, the LED will flash from red to green and when the optimal operating temperature has been reached (within 60 seconds) the LED will illuminate the LED with a green light and will emit a double beep to alert the user.
- If you have purchased a freestyler styling iron that is fitted with an adjustable temperature control, simply select the desired temperature by turning the control dial and follow the above procedure.
- After using, always turn off and unplug the freestyler and allow to cool completely before storing, ensuring the power cord is never wrapped around the styling iron as this may damage the power cord voiding your warranty.

## Cleaning

- Ensure the styling iron is switched off, remove the plug from the power socket and leave to completely cool before cleaning.
- Use a clean, soft slightly dampened cloth to remove any marks or excess make-up from the outside casing and apply with a soft dry cloth an approved product from a reputable salon or hair professional directly onto the plates to remove any excess hair product ensuring not to scratch the plates as this will lesson the effectiveness of the plates.

## Safety

**For the safety of both yourself and others you should observe the following safety precautions without exception:**

- Never use the styling iron if the power cord or plug looks damaged
- Never attempt to use the styling iron if it has become defective or malfunctions in any way
- Never use the styling iron in or around water
- Never leave the styling iron unattended
- Never touch the plates when they are hot and avoid any contact with the skin
- Never place the styling iron on any heat sensitive surface and always allow to cool completely before storing
- Never wrap the power cord around the styling iron
- Never apply styling products directly onto the styling iron

## Our Warranty

- Your new freestyler has been manufactured to the highest standards and will provide effective, reliable results when used in accordance with the instructions.
- Every freestyler is individually tested before leaving the factory however, in the unlikely event that the styling iron proves to be defective due to faulty workmanship or materials within two years for “private use” and one year for “commercial use”, then at its sole discretion, Anoroc Limited will repair or replace the styling iron.
- To claim under this guarantee you should return your styling iron to Anoroc Limited, in its original packaging, together with your proof of purchase and details of the fault.

# Product Registration

Please complete and return this product registration card to activate the warranty.
